See Well for a Lifetime. Make Vision a Health Priority! Learn How.

Everyone’s vision can change with age. Some changes are normal, but losing vision is not a normal part of getting older!

As you get older, you are at higher risk of developing several age-related eye diseases and conditions. Often, there are no early warning signs or symptoms before they become serious and cause vision loss.

If you are aged 50 or older, make a point of having a comprehensive dilated eye exam every year or as recommended by your eye care professional—even if you are not experiencing vision problems!

Come and learn more about taking care of your eyes and protecting your vision.
